

Joul

From the Khmer word for "rent."

Cambodia's room rental, simplified.

A free, Khmer-first marketplace connecting room renters and room owners across Cambodia.

Finding a room in Cambodia is broken.

Both sides of the market are wasting time, money, and trust.

FOR RENTERS

Hours of scrolling. No real answers.

Students and young workers spend days searching Facebook groups for room listings. Most posts are outdated. Many are scams. Tenants often physically travel just to find out the room was rented weeks ago.

FOR LANDLORDS

Expensive agencies. Paper signs that fade.

Small landlords pay agencies one month's rent in commission or print signs that fade in the rain. Facebook posts disappear within hours under newer content. There is no way to manage multiple rooms in one place.

FOR THE MARKET

No central place. No real-time data. No trust.

Cambodia has no purpose-built rental platform for ordinary rooms. Pricing is opaque. Inventory is invisible. Rooms sit empty while renters can't find them. The whole market runs on guesswork.

Joul is the answer.

A purpose-built, Khmer-first rental marketplace for Cambodia.

Joul connects room renters and room owners in one place — for free.

Landlords list their rooms once. Renters find them with smart search and real-time availability — no ghost listings, no agency fees, no wasted trips.

Every user on Joul can be both a renter and a landlord, reflecting how small Cambodian property owners actually behave.

Free for everyone

No listing fees, no commissions, no subscription. Always.

Real-time availability

Every listing is clearly marked Available or Occupied. Occupied rooms are hidden from renters.

Khmer-first by default

Built in Khmer. Designed for mobile. Made for how Cambodians actually browse and rent.

Built, tested, ready to launch.

Working prototype with 16 screens, multi-language UI, and full landlord and renter flows.

Note: prototype currently shows 'FindRoom.KH' branding; rebranding to Joul ahead of public launch.

Khmer-first UI
Khmer is the default language for Cambodian users; English available

Real impact for real Cambodians.

Who Joul helps, why it matters, and what changes when it works.

50,000+

Students relocating to Phnom Penh each year

Joul gives them a faster, safer way to find a room before they arrive — without depending on relatives or Facebook scams.

200,000+

Young workers and migrants in Phnom Penh

Factory workers, NGO staff, and first-time professionals all need affordable rooms. Joul makes that search transparent and free.

10,000+

Small landlords across Cambodia

Most own just 1-5 rooms. Joul replaces expensive agencies and paper signs with a free, permanent digital listing.

Figures are rough estimates derived from National Institute of Statistics data and university enrollment trends; figures will be refined as Joul launches and gathers real usage data.

A real market, still unowned.

Estimated PropTech opportunity in Cambodia.

TAM ~\$2.4B

Total Addressable Market — Southeast Asia PropTech rental segment

SAM ~\$320M

Serviceable Available Market — Cambodia urban rental (all types)

SOM ~\$18M

*Phnom Penh room rental
(Year 1-3 target)*

How the numbers break down

- Cambodia urban population: ~4.25M
- Phnom Penh population: ~2.5M, growing
- Avg room rent: \$60-\$250/month
- Youth median age: ~27
- Internet users: 9M+ (53%+ penetration)
- Smartphone penetration: 70%+

Numbers are estimates based on National Institute of Statistics data, regional PropTech benchmarks, and primary research. Will be refined through validation.

Three forces. One window.

Why this is the right moment to launch a Cambodian rental marketplace.

01

Digital adoption is accelerating

Cambodia has 9M+ internet users, 70%+ smartphone penetration, and one of the highest Facebook penetration rates in Asia per capita. Cambodian youth are mobile-first and comfortable with digital platforms.

02

Urban migration keeps rising

Phnom Penh is growing at an accelerating rate. Tens of thousands of students, workers, and migrants relocate to the capital every year, creating sustained, growing demand for rental rooms.

03

The market is still unowned

No purpose-built rental platform exists for Cambodia's affordable room segment. Facebook and Telegram aren't designed for it. The window to become Cambodia's default rental platform is open — for now.

Free now. Sustainable later.

A two-stage model designed for marketplace adoption, then revenue.

STAGE 1

Year 1 — Build the audience

100% Free

Free listings for landlords. Free search for renters. No fees, no commissions, no subscriptions. The goal is trust and habit — not revenue.

- Free unlimited listings
- Free search and filters
- Free Khmer-first UI
- Free direct contact

STAGE 2

Year 2+ — Add sustainable revenue

Optional Paid Tools

Once Joul is the trusted default, introduce paid tools that landlords with bigger operations will naturally want. The free marketplace stays free.

- Featured listings (\$2-10 / period)
- SaaS for multi-unit landlords (\$15-50 / month)
- In-app payments (1-2% transaction fee)
- Verified-listing badge

Same playbook as Airbnb, Zillow, and OLX: trust and audience first, monetization second.

Launch in 8 weeks.

Public launch: Saturday, July 25, 2026 — timed to the August student migration into Phnom Penh.

- **Week 1-2** Real backend live. 3-5 warm landlords listed with photos.
- **Week 3-4** Cold-door outreach begins near RUPP. Mid-point review on June 28.
- **Week 5-6** Student-side activation (Facebook groups, Telegram). Soft launch with 30-50 users.
- **Week 7-8** Final polish. 22-25 active landlords. Public launch July 25 to catch August intake.

LAUNCH DAY TARGETS: 20+ active landlord listings • 200+ engaged students • joul.kh live with HTTPS • Khmer + English UI

Why nothing else works.

Cambodia's rental market is currently served by general-purpose tools that weren't designed for it.

	Facebook Groups	realestate.com.kh	Khmer24 / BongLoy	Paper Posters	JOUL

Only Joul is purpose-built for Cambodia's affordable room rental market — free, permanent, searchable, and availability-aware.

Built by Cambodians, for Cambodians.

A local team with founder-market fit and shipping velocity.

“

I built Joul because I lived the problem. Months of scrolling Facebook for a room. Trips across town to see places already rented. Time and money wasted on a system that doesn't work.

If I needed this, every student, worker, and migrant in Cambodia needs it too.

— Bobe, Co-founder

Bobe

Co-founder — Business

Product scope, go-to-market, landlord outreach, brand, partnerships. Cambodian, based in Phnom Penh, lived the rental problem firsthand.

Tech Team

Co-founder — Engineering

Built the full working prototype: Next.js + Firebase, 16 screens, Khmer/English UI, mobile-first design. Currently expanding for production launch.

What this grant enables.

Every dollar maps to a launch deliverable in our 8-week plan. Total ask: \$10,000 USD.

\$2,500

Marketing & outreach

Targeted Facebook ads to Phnom Penh students, printed cards and flyers, university partnerships.

\$4,000

Backend engineer

3-month part-time hire to harden Firebase backend, security rules, and image handling for production scale.

\$1,500

Legal & compliance

Local Cambodian lawyer review of Terms of Service and Privacy Policy; company registration.

\$1,000

Infrastructure

Domain (.kh), Firebase Blaze plan overflow, error monitoring, daily backups for the first year.

\$1,000

Operations & contingency

Transportation for door-to-door landlord outreach, communication costs, 10% buffer.

OUR VISION

To become the rental operating system for Cambodia.

Within 5 years, every step of the Cambodian rental lifecycle runs through Joul — finding, listing, contracting, paying, managing. Beyond Cambodia, the same model applies in Laos, Myanmar, and Vietnam.

THE ASK

\$10,000

Non-dilutive grant funding to support the 8-week pre-launch push, a critical part-time engineering hire, and the first 90 days of operation post-launch.
